Service Providers Subject to PCI Data Security Standard
An agency using a service provider to store, process, or transmit cardholder data on an agency’s behalf is required to ensure that the service provider is compliant with the “Payment Card Industry Data Security Standard” (PCI-DSS). The PCI Security Council’s definition of a “service provider” is a “Business entity that is not a payment brand, directly involved in the processing, storage, or transmission of cardholder data. This also includes companies that provide services that control or could impact the security of cardholder data.”

Two Types of Service Providers
A service provider is any entity that processes or transmits cardholder data on the agency’s behalf, such as a payment gateway. The entity is normally a “third-party” service provider with which the agency contracts. South Carolina Interactive LLC (SCI) that provides web portal services to agencies in South Carolina is an example of a third-party “payment gateway” service provider.

A service provider can also be an entity that provides web hosting services and/or manages components of the agency’s cardholder data environment (CDE), such as routers, firewalls, databases, physical security, and/or servers. This could be a third-party service provider. However, in the government arena, a separate agency within the government that that provides IT-related services to multiple agencies could be considered a service provider. Such an entity is referred to as an “internal” service provider. In some cases, the SC Department of Administration’s Division of Technology Operations (DTO) could be considered an internal service provider.

PCI Requirements for Service Providers
The primary requirements pertaining to service providers from an agency’s perspective are found in sections 12.8, 12.9, and 12.11 of the PCI-DSS.

</tr>
<tr>
<td>12.8.5</td>
</tr>
<tr>
<td>12.9</td>
</tr>
</tbody>
</table>
### 12.11 Additional requirement for service providers only:

Perform reviews at least quarterly to confirm personnel are following security policies and operational procedures. Reviews must cover the following processes:

- Daily log reviews
- Firewall rule-set reviews
- Applying configuration standards to new systems
- Responding to security alerts
- Change management processes

**Note:** This requirement was a best practice until January 31, 2018, after which it became a requirement.

A merchant is required to **manage** each service provider by:

1. Maintaining a **written agreement** (between the merchant and the service provider) that includes an acknowledgement that the service provider is responsible for the security of cardholder data the service provider possess or otherwise stores, processes or transmits on behalf of the customer, or to the extent that they could impact the security of the customer’s cardholder data environment; and

2. Maintaining a program to **monitor** the service provider’s compliance status on at least an annual basis.

There are several methods that could be employed to verify a service provider’s PCI compliance. The method would depend upon the agency’s risk assessment of the service being provided, and whether the service provider is a third-party or an internal service provider. Verification could include either:

1. Require the service provider to obtain and provide the agency evidence of a “Report on Compliance” (ROC) prepared by a Qualified Security Assessor (QSA)

2. Verify that the service provider is listed on either Visa’s or MasterCard’s list of approved service providers:
   (Note that an internal service provider would not be on either list.)

3. Require the service provider to take the same steps that a merchant would be expected to take to validate its compliance (i.e., prepare version D of the annual Self-Assessment Questionnaire, and to undergo quarterly external vulnerability scans), and provide evidence of validation of compliance as may be requested.

### Two Levels of Service Providers

According to Visa’s Cardholder’s Information Security Program (CISP), there are two levels of service providers. A service provider that processes more than 300,000 transactions per year is considered a “Level 1” service provider and is **required** to undergo an onsite security assessment by a QSA. A service provider that processes less than 300,000 transactions per year is considered a “Level 2” service provider and is **not** required to undergo an onsite security assessment by a QSA. While MasterCard considers a Level 1 service provider to be one that processes over 1 million transactions per year, the more restrictive requirement of the two card brands that are accepted by the merchant (Visa’s) should be adhered to.
The card brands' requirements for service providers can be viewed at:

**Two Arrangements with Service Providers**

An agency may utilize a service provider to process merchant card transactions under one of two types of arrangements:

1. **Agency** is considered the “merchant of record;” or
2. **Service provider** is considered the “merchant of record”

The agency’s arrangement with the service provider determines the degree of applicability (scope) to the PCI Data Security Standard (PCI-DSS).

SC.Gov, the portal provided by SC Interactive (SCI), offers both types of arrangements. An agency subscribing to services offered by SCI, or any other service provider, should be aware of the arrangement being utilized. The two arrangements are discussed below.

**Service Provider as Merchant of Record**

Under arrangements where the **service provider** is considered the “merchant of record,” card transactions are processed under the service provider’s merchant number it has with its merchant card processor (e.g., First Data, Elavon, etc.). The agency is not issued a merchant number, but perhaps an account number assigned by the service provider.

The PCI-DSS implications for the agency are greatly reduced, but not entirely eliminated. Under such arrangements, the service provider, not the agency, is directly accountable to the merchant card processor for all requirements of the PCI-DSS. The agency is responsible for certain requirements of the PCI-DSS, at least requirements 12.8 and 12.9.

However, as indicated in requirement 12.8.2, the agreement with the service provider may include terms that require the agency to be compliant with the PCI-DSS as well. It is advisable for the requirements assigned to the agency be identified in writing. Such terms in the agreement may have the effect of passing liabilities associated with a security breach along to the agency, if the agency’s non-compliance contributes to the breach. The agency may therefore be accountable to the service provider for compliance, not to the merchant card processor.

For agencies using SC Interactive (SCI) under the arrangement where SCI is the merchant of record, the follow terms in SCI’s agreements are examples of where the service provider passes on certain liabilities for PCI-DSS compliance to the agency.

**Compliance with the Payment Card Industry's Data Security Standards**

*During the terms of this Agreement, the parties agree to be compliant with the applicable portions of the Payment Card Industry's Data Security Standards (the "PCI DSS"), as amended from time to time. Upon request, a party agrees to provide the other party (in this case, also a requesting party) with written proof of its compliance with the PCI DSS.*
PCI-DSS Compliance

The parties understand and agree to comply with the Payment Card Industry Data Security Standard ("PCI DSS") and any amendments thereto. The parties acknowledge that each party is responsible for securing cardholder data that it may transmit, store, or process on its systems. The parties agree to maintain a list of which PCI DSS requirements are managed by SCI, and which requirements are the responsibility of Agency to include in Agency’s PCI DSS reviews. Upon request, a party agrees to provide the other party (in this case, also a requesting party) with written proof of its compliance with the PCI DSS. As the operator of the Swipe Device, Agency shall be responsible for compliance with PCI DSS version 3.0 and any current versions regarding the Swipe Devices, including, but not limited to, the safeguarding, maintenance, inspection and training obligations set forth in PCI DSS Requirement 9.9.

When the service provider is the merchant of record, any PCI-DSS validation required of the agency would be made to the service provider, not to the service provider’s merchant card processor.

Agency as Merchant of Record

Under arrangements where the agency is considered the “merchant of record,” card transactions are processed by the service provider, but under a merchant number assigned to the agency by the agency’s merchant card processor (e.g., First Data). In addition, the agency may or may not be assigned an account number by the service provider.

Under such arrangements, the agency is directly accountable to the merchant card processor for all requirements of the PCI-DSS. Requirements 12.8 and 12.9 regarding written agreements and monitoring the service provider’s compliance is critical. Any fines levied by the merchant card processor would be levied against the agency, not against the service provider.

Some agencies subscribing to services from SC Interactive (SCI), especially those subscribing after 2016, do so under the arrangement where the agency is the merchant of record, not SCI.

Agencies using an internal service provider (e.g., SC Department of Administration’s Division of Technology Operations - DTO) would in most cases be considered the merchant of record. It is possible for an agency to use an internal service provider like DTO as well as a third-party service provider. For example, the agency could use a DTO-provided network to access a third-party payment gateway (e.g., SCI’s SC.Gov) where SCI is the merchant of record. In these cases, either the third-party service provider or the agency could be the merchant of record.

An agency using the statewide merchant card processing services contract with First Data, with the agency being the merchant of record, is subject to the State Treasurer’s PCI compliance policy requiring validation through First Data’s “PCI Rapid Comply” or other equivalent validation service. The policy, as well as a PCI Compliance Roadmap document, can be viewed at the Treasurer’s website: https://treasurer.sc.gov/government/banking/
## Comparison of PCI Data Security Standard (PCI-DSS) Requirements

**Agency Using First Data as Primary Processor Versus Using SCI (SC.Gov) as Primary Processor**
